

Recovery Iowa - Spencer 360

August, 2022

Report provided to the Iowa Department of Public Health

This project was supported by the Iowa Department of Public Health, Bureau of Substance Abuse (IDPH) via a sub-ward from the Substance Abuse and Mental Health Services (SAMHSA) of the U.S. Department of Health and Human Services (HHS) as part of a financial assistance award totaling 350,000 with 100 percent funded by SAMHSA/HHS. The contents are those of the author(s) and do not necessarily represent the official views of, nor an endorsement by, IDPH, SMHSA/HHS, or the U.S. Government

Overview

At the request of the Iowa Department of Public Health, Bureau of Substance Abuse, the Public Science Collaborative (PSC) developed community-specific reports to support recovery efforts in Iowa. Recognizing the need to strengthen substance use recovery efforts throughout the state, we identified a large number of existing recovery-oriented resources in Spencer, which we describe and map in the pages that follow. We developed additional maps to identify at-risk neighborhoods that will benefit from targeted health interventions and additional community resources. For additional questions or information about this report, the data tools described, or the Public Science Collaborative, please reach out to the principal investigators of this study, Dr. Shawn Dorius at sdorius@iastate.edu, or Dr. Cassandra Dorius at cdorius@iastate.edu.

What is Recovery?

Though substance use recovery is an evolving concept that has been defined in a number of ways over the years, an emerging consensus is that recovery is a voluntary path toward improved personal well-being coupled with a diminished risk of substance use relapse. As noted by Bill White (2007):

.....

Recovery is the experience through which individuals, families, and communities impacted by severe alcohol and other drug (AOD) problems utilize internal and external resources to voluntarily resolve these problems, heal the wounds inflicted by AOD related problems, actively manage their continued vulnerability to such problems, and develop a healthy, productive, and meaningful life.

In White's view, resources help individuals, families, and communities in two ways. First, they help address alcohol and other drug-related problems (for example, addiction, unemployment, housing instability, family separation), and second, they support health, productivity, and meaning in post-treatment life. The appeal of this view is that it is explicit and direct in its recognition that recovery involves not only internal resources such as mental, emotional, and genetic factors but also external ones. In thinking about where to focus federal and state resources to develop a network of community-based recovery centers in Iowa, the key question is, "What kinds of external resources matter most for sustained SUD recovery?"

If we knew which resources were most helpful to long-run recovery, we could target towns and cities with large stocks of 'recovery resources' to grow Recovery Community Centers

.....

What is a Recovery Community Center?

Recovery Community Centers (RCCs) represent low-cost, member-driven, voluntarist, locally managed, and community-engaged pathways to sustainable recovery for people with substance use disorder, or SUD. RCCs accomplish these goals by linking people to existing resources and infrastructure and promoting a vibrant recovery culture based in a physical community center where people in recovery can visit, engage with others in recovery, and access resources. RCCs are an innovative, safe, and helpful source of community recovery support that provides linkages to existing local services and resources that support recovery for people with a substance use or mental health disorder. RCCs support recovery by helping people in the community who have a history of substance use to develop recovery capital, the personal resources that enable people to live healthy, productive, and community engaged lives. RCCs do this by connecting members of the recovery community, called peers, with different types of services such as recovery coaching, medication assisted treatment, connection to employment services and child care, recovery-oriented housing, or education and workforce development training services. Located in the heart of the community, Recovery Community Centers improve the ability of the local recovery community to care for one another, and they also help destignatize the lives of people in recovery.

The RCC model of recovery is validated by academic studies and is promoted by both the SUD community and public health officials. However, finding the right communities for RCC development in Iowa has proven difficult, underscoring the fact that Iowa is one of just a few states in the U.S. that has yet to adopt the recovery community model.

Is Your Community Recovery Ready?

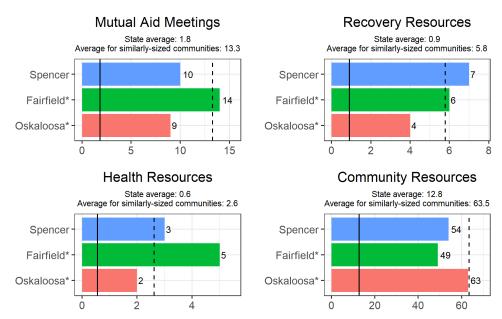

What is the RRCI and how was it created? We consulted scientific literature on substance use recovery and engaged key stakeholders who work directly with people in recovery around the country and in Iowa. This helped us to identify 17 unique community-based resources that we collected for almost all of Iowa's 944 cities and towns. In total, we found nearly 16,000 community features that support recovery. We mapped and analyzed these resources so we could identify a short list of 'Recovery Ready' communities across the state, culminating in the first-of-its-kind index: The Recovery Ready Community Index (RRCI).

The RRCI encompasses four dimensions: breadth, depth, size, and strength. Breadth of recovery resources was measured by counting the number of different types of recovery resources in each county and community. For example, counting if there is at least one hospital, one treatment center, and one drug drop off location in town. Depth of recovery resources was measured by first counting the total number of resources in each category and then ranking cities accordingly. This gives added importance to places that have, for example, more than one medication assisted treatment provider and many different recovery houses in town. Size of local recovery culture was measured by the total number of weekly mutual aid and peer support meetings per week in each city (e.g. total number of NA and AA meetings). Finally, the strength of the recovery community was measured as the difference between the total number of weekly peer support meetings and the number of meetings expected, based upon the total population of each town. These four dimensions were used to create the Recovery Ready Community Index. The RRCI is the simple average of each town's ranking across the four dimensions or recovery readiness. Places that ranked high on all four dimensions are labeled as especially recovery ready.

How recovery ready is your community? Are you well-positioned to support a Recovery Community Center in your community? Relative to all cities, Spencer ranks low in terms of its recovery readiness. According to the Recovery Ready Community Index (RRCI), Spencer scored 24.5, placing it at 4th when compared with other Iowa cities (Iowa's RRCI state average is 32.7).

Another way to understand recovery resources in Spencer is to compare them with those of the state average and other communities of similar size. This comparison is displayed in Figure 1, which compares Spencer with Fairfield and Oskaloosa. An average across all Iowa towns as well as the subset having a comparable population level are also included as a baseline for comparison.

Fig. 1. Recovery Ready Community Index: Comparison of Spencer to Other Iowa Communities on 'Recovery Readiness'

^{*} The lowa cities most comparable to Spencer by population are Fairfield and Oskaloosa.

^{**} The solid vertical line represents the average for all 944 communities in lowa and the dashed vertical line represents the average for lowa communities with populations between 10,000 and 49,999 people.

What Peer Support Meetings are Available in Your Area?

Recovery meetings, such as Alcoholics and Narcotics Anonymous, play a significant role in facilitating the recovery process. Despite the importance of these meetings there is no coherent 'one stop shop' to find the meeting you need, when you need it. People usually need to go through several steps, such as searching for meetings on Google, or looking for a specific meeting time or place on a local listings'website. It can be hard enough to connect with peer support during the best of times, but doubly difficult when you are in crisis and questioning your recovery. Magnifying the challenge of finding the right meeting at the right time is being new to a community, unfamiliar with the members of a local meeting, and being in a moment of duress.

.....

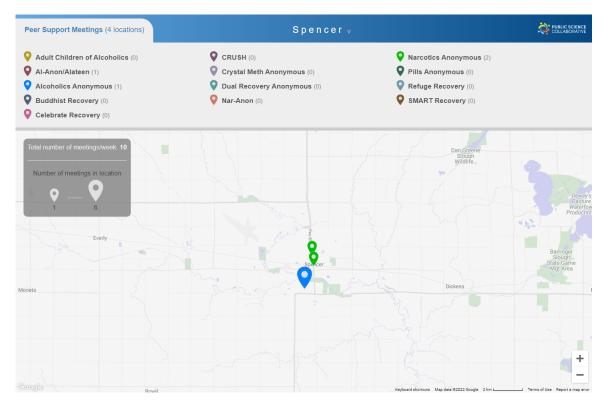

Fig. 2. Peer Support Meetings in Spencer

Note: Larger markers indicate the locations that host more than one meeting per week. For example, in Spencer there are 18 total meetings hosted each week in the locations identified above.

We developed the PSC Meeting Finder tool above to make it easier to find local meetings. We do this by presenting a map-based list of meetings all throughout Iowa and we update the map every single day. It's a simple interface that helps people to find the appropriate meetings nearby, right now. Users can filter meetings by time of day, day of week, or whether childcare is available, for example, to find the right meeting at the right time. Having a responsive design, PSC Meeting Finder Tool runs efficiently and quickly on many different kinds of computers and mobile devices such as smartphones. Figure 2 is a screen capture of the PSC Meeting Finder where you can see the location of all known peer support meetings in your community. A web version of this map is available at: http://public-science.org/reportmaps/meetings/?city=Spencer. Note that the peer support data is updated regularly and may not exactly match Figure 2. A full listing of these resources is provided as a table with meeting, type, group name, number of meetings per week, and location of meetings in Appendix 2.

Spencer has about 18 peer support meeting locations in a given week. Figure 2. indicates the location of these meetings as well as locations where there are few or no weekly meetings, which may help local peer support groups to identify new places to sponsor a meeting and support local recovery. The number of meetings held by each group is tabulated in the top panel of this figure indicating the prominence of different peer support organizations in the community.

What Recovery Resources Are Available in Your Area?

Despite their importance, community-based recovery resources can be hard to find. Whether a person is new to the community or a long-term resident, some resources remain unknown to many people in the community. The PSC Recovery Resource Locator aims to help solve this problem. Figure 3 is a screen capture of the PSC Recovery Resource Locator where you can see the location of some of the resources your community offers to its recovery community. A web version of this map is available at: http://public-science.org/reportmaps/recoveryresources/?city=Spencer. A full listing of these resources is provided as a table with resource name, type, and location in Appendix 3.

.....

Spencer has 10 recovery resources available to support its residents in recovery from substance use disorders. These resources provide a variety of services and care to respond to the needs of individuals in the community. Drug drop off locations allow individuals to dispose of their unneeded presecription drugs to limit abuse of these substances. Medication assisted therapy helps alleviate withdrawal symptoms for individuals in recovery. Mental health resources are also an important resource in helping treat mental health challenges associated with SUD. Mutual aid and recovery housing groups are designed to provide a community of support to help address the material needs of people using substances. Finally, SUD treatment facilities and Veterans Affairs health clinics provide medical care to individuals using substances. These resources and others like them are tabulated in the top panel of Figure 3 to provide insight into strong and weak areas in community recovery resources.

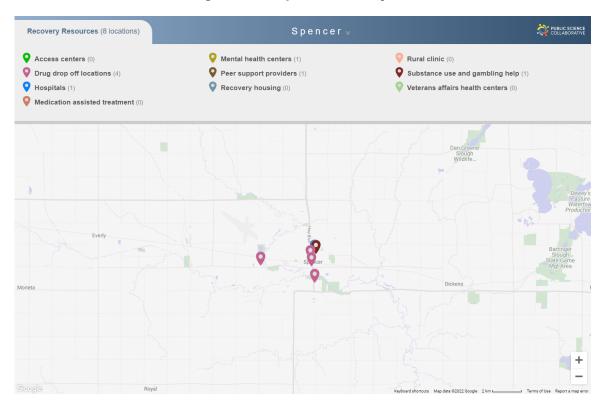

Fig. 3. Recovery Resources in Spencer

What Community Resources Are Available in Your Area?

In addition to peer support meetings and clinical care, people in recovery benefit from other community resources. For example, having easy access to parks and natural areas has been shown to support substance use recovery. Participation in community groups, including religious organizations, may be a source of strength and support for many people in recovery. We have identified many additional community assets that can help people in their own recovery journey. The state of Iowa has a wide range of public and private institutions and organizations dedicated to providing health and human services, support, and activities to improve quality of life and well-being of all Iowans. The PSC Community Resource Locator is a utility for discovering many of these resources. Figure 4 is a screen capture of the PSC Community Resource Locator where you can see the location of some of the resources your community offers to its recovery community. A web version of this map is available at: http://public-science.org/reportmaps/communityresources/?city=Spencer. A full listing of these resources is provided as a table with resource name, type, and location in Appendix 4.

.....

Spencer has 54 community resources available for its residents to live their best lives and to support those in recovery from substance use disorders. These may include childcare providers, universities and technical colleges, libraries, parks, places of worship, K-12 schools, and workforce development centers. The number of each type of resource is broken down in Figure 4., highlighting areas of success and areas for growth in your community.

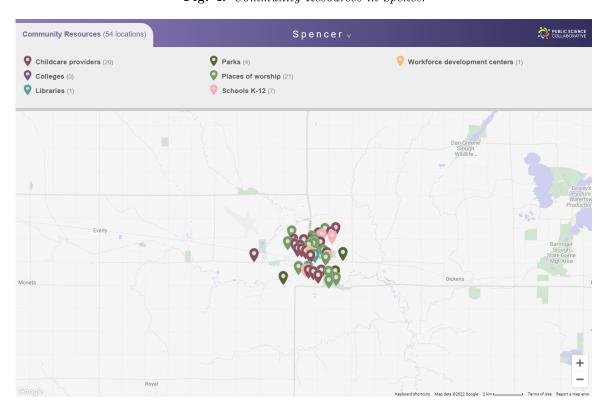

Fig. 4. Community Resources in Spencer

Which Neighborhoods in Your Community Need Additional Health Resources and Support?

The Public Science Collaborative has developed data resources to help community organizations, local governments, and public health practitioners to more effectively target substance use prevention, treatment, and recovery interventions to the places in greatest need of resources. Geographic 'hot spots' identify places where local residents are at especially high risk for substance use disorder. We estimated statistical models using administrative data from the Treatment Episode Admissions Dataset (TEDS-A) and the National Survey of Drug Use and Health (NSDUH) to measure significant relationships between substances of misuse and socio-demographic characteristics known to affect health equity and substance use vulnerability. Neighborhood characteristics associated with each substance (e.g. methamphetamine, benzodiazepines) were overlaid with Census Bureau estimates of these same neighborhood characteristics, by census tract. Once mapped, these data help us to identify places with especially high concentrations of at-risk characteristics in need of targeted resources to reduce health inequities. You can learn more about the underlying models for this index in Appendix 1. The resulting maps are included in the pages that follow, and interactive maps can be found online at https://publicsciencecollaborative.shinyapps.io/iowasdoh/ and https://publicsciencecollaborative.shinyapps.io/io substance use vulnerability/.

Towns and cities in Iowa typically have neighborhoods with distinctive risk profiles, with some at especially high (or low) risk of harmful use of a specific substance, such as Heroin, Opioids, or Methamphetamine. Identification of these locations can guide public health outreach efforts and enable more targeted, substance-specific interventions based upon known neighborhood risk factors. To do so, we have developed a city map to identify overall substance use vulnerability, which can be used to support generalized substance use prevention, treatment, and recovery interventions (Figure 5). Maps pertaining to Opioid, Heroin, and Methamphetamine use are included to help identify trends specific to these specific drugs (Figures 6, 7, 8). Typically, areas high in overall substance use vulnerability are also high in substance use. When this is the case, it suggests that general health resources would benefit these places and their residents. If a particular neighborhood is high in a specific substance, drug-specific interventions may be an effective tool in supporting the area.

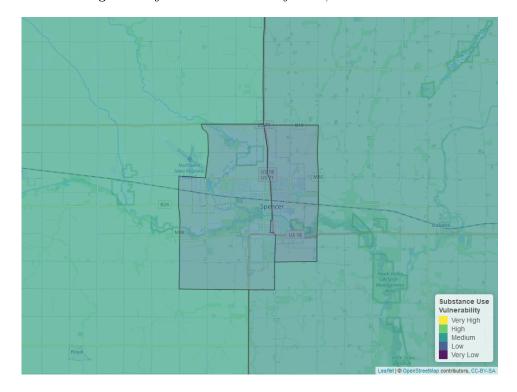

Fig. 5. Neighborhood Vulnerability Index, All Substance Use

Overall substance use vulnerability varies by neighborhood in Spencer, but is generally about equal to other communities in Iowa (see Figure 5). Due to neighborhood vulnerability, specific neighborhoods may benefit from a targeted approach rather than community wide efforts. Community-wide vulnerability was highest for opioids,

and a breakdown for each substance is shown in the figures below.

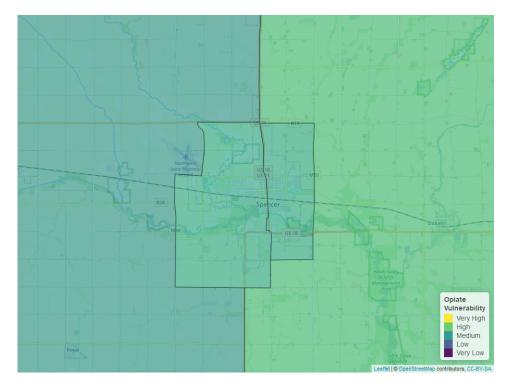

Fig. 6. Neighborhood Vulnerability Index, Opioid Use

The overall opioid risk in Spencer is about equal to the average for communities in Iowa (see Figure 6).

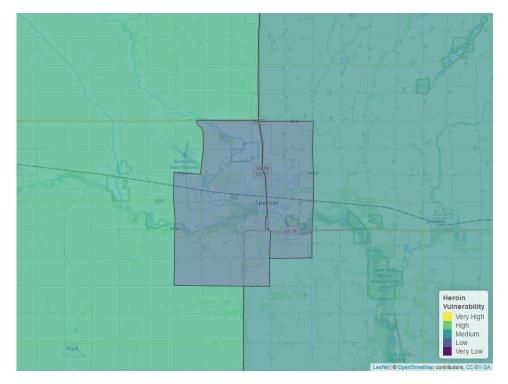

Fig. 7. Neighborhood Vulnerability Index, Heroin Use

The overall heroin risk in Spencer is about equal to the average for communities in Iowa (see Figure 7).

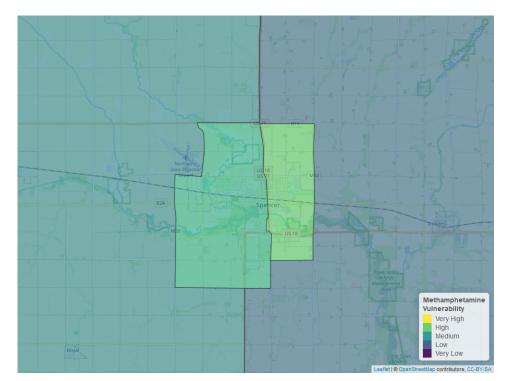

Fig. 8. Neighborhood Vulnerability Index, Methamphetamine Use

The overall meth risk in Spencer is about equal to the average for communities in Iowa (see Figure 8).

What's Driving Health Disparities in Your Community?

In addition to the neighborhood vulnerability maps above, the Public Science Collaborative created a neighborhood map to understand health disparities in Spencer that draws on well-established social determinants of health. By social determinants, we refer to health risks that are social in origin and tend to be unevenly distributed within a city or town. For example, in places with high average levels of education and low unemployment rates, residents tend to also have better overall health (e.g. longer life span and more healthy years of living). In places where average incomes are low and the rates of single parenting are high, people often have worse health, including higher death rates due to overdose and fewer healthy days. Knowing something about where the social determinants of health support well being and where their scarcity decreases well being can help local community organizations and governments to better target investments to reduce health disparities between neighborhoods.

.....

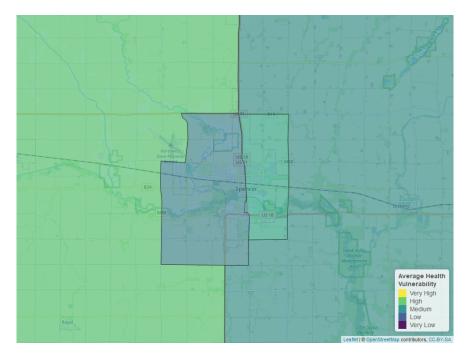

Fig. 9. Neighborhood-Level Health Disparities, Social Determinants

According to the social determinants we considered, unemployment and lack of insurance is the biggest risk factor for poor health and between neighborhood health disparities in Spencer. Overall, health risks in Spencer are about equal to the average for communities in Iowa.

APPENDIX 1: Data Used in this Report

.....

10.1Recovery Ready Community Index (RRCI)

Data Tool: Recovery Ready Community Index

Data: Data: PSC Meeting Finder Tool data; PSC Recovery Resources Locator Tool data; PSC Community Resources Tool data, U.S. Census Bureau American

Community 5-year Estimates (ACS), 2015-2019

The Recovery Ready Community Index was designed to give a holistic view of a community's "recovery readiness" and their ability to support people in recovery. The RRCI is constructed with four sub-measures: Breadth of Recovery Resources, Depth of Recovery Resources, Size of Recovery Culture, and Strength (Vibrancy) of Recovery Culture. You can read more about how the RRCI was developed on page two of this report. The specific recovery and community data collected to build the RRCI are detailed below and listed by name and source in Appendices 2, 3, and 4

10.2 PSC Meeting Finder Tool

Interactive Tool: http://public-science.org/meetingfinder/

Data updated daily:

Adult Children of Alcoholics, Al-Anon/Alateen, Alcoholics Anonymous (AA), Buddhist recovery, Celebrate Recovery, CRUSH, Crystal Meth Anonymous, Dual Recovery Anonymous, Nar-Anon, Narcotics Anonymous (NA), Pill Anonymous, Refuge Recovery,

and SMART Recovery

Under the hood, the PSC Meeting Finder Tool is a data pipelining system that fetches the information of the 13 different types of recovery meetings from their original sources, and integrates them into a state map (Following Figure). This system is composed of four major logical components: (1) automated robots that oversee and 'scrape' the peer-support websites for daily updates, (2) database infrastructure, (3) the web server infrastructure, and (4) PSC Meeting Finder web-based application. There are two types of automated program robots,

called 'bots', utilized in this system: commander bots and scraper bots. The commander bot is in charge of running and logging the scraper bots, and reports to the system administrator when a scraper bot is unsuccessful. A scraper bot is in charge of scrapping the original listing websites, and populating the database with the cleaned data. The original listings might be unstructured and contain dirty data. It is the scraper bot's duty to make sure that the data that is inserted into the database is clean and structured. These data are then pulled into the users' browser by the PSC Meeting Finder Tool.

Table. 1. Peer Support Meeting Information for Spencer

| Name of Meeting | Web Resource | # of locations | $\# 	ext{ of meet-} \ 	ext{ings per week}$ |
|----------------------|--------------------------|----------------|--------------------------------------------|
| Al-Anon/Alateen | https://al-anon.org | 4 | 4 |
| Alcoholics Anonymous | https://www.aa-iowa.org/ | 20 | 19 |

Recovery meetings data are gathered and cleaned from 13 web-based resources via our data pipeline system. Most of these resources utilize web scraping techniques (in Python by standard requests or packages such as Selenium and BeautifulSoup packages) as well as parsing PDF (Python: PyPDF2 package) files and XLS sheets (Python: csvkit). Table 1 identifies the name of the meeting, web resource, number of locations, and number of meetings per week.

Fig. 10. PSC Meeting Finder Tool - Under the Hood

10.3 PSC Resource Recovery Tool

Interactive Tool:

http://public-science.org/recoveryresources

Data updated yearly:

Iowa Office of Drug Control Policy; Wikipedia of Iowa hospitals; Iowa Department of Public Health; Recovery and Resilience Coordinator with AmeriCorpAllTreatment.com; TransitionalHousing.org; WomenSoberHousing.com; Addicted.org; Recovery.org; Drug-rehabs.org; Iowa Association of Rural Health Clinics; U.S. Department of Veterans Affairs

Recovery resources include access centers, drug drop off locations, hospitals, medication assisted treatment locations, mental health centers, peer support providers, recovery housing, rural clinics, SUD and problem gambling treatment locations, and Veterans Affairs health centers. To collect this data, we used a variety of public resources, including government agencies and recovery websites. Our collection of recovery resources is not necessarily exhaustive, but represents the data accessed through our initial effort and following the advice of substance use experts and researchers. This data was acquired through a variety of means, including simple downloads, manual data entry, computer reading of PDF files, and scraping websites. See the table below for the recovery resources data sources.

Table. 2. Recovery Resource Locator Tool Data Sources (Downloaded Sept 2020-May 2021)

10.5 Substance Use Vulnerability Index

Data Tool: Substance Use Vulnerability Index

Data: Treatment Episode Data Set-Admission and Discharge (TEDS), 2000-2018National Survey on Drug Use and Health data (NSDUH), 2015-2019U.S. Census Bureau

American Community 5-year Estimates (ACS),

2015-2019

Geographic 'hot spots' of people at risk for substance use disorder were first predicted based on models of administrative data from Treatment Episode Data on admissions (TEDS) and the National Survey of Drug Use and Health (NSDUH) data that assessed significant relationships between key substances and socio-demographic characteristics known to affect health equity and substance use vulnerability (Tables 5-6results below). Then, the significant predictions of risk for each substance were overlaid with Census Bureau's American Community Survey 5-year estimates of these population characteristics to provide a visual representation of places with especially high concentrations of people with at-risk characteristics. The Census characteristics described in Table 4 below are reported in Figures 5-8

Table. 4. Substance Use Risk Index using U.S. Census Bureau American Community 5-year Estimates (2015-2019)

| Risk Characteris- tics | Census Table | Description |
|---------------------------|--------------|------------------------------------------------------------------------------------|
| Age | B06001 | Data table includes population by age categories. |
| Sex | B01001 | Data table includes population by sex. |
| Poverty Status | S1701_C01 | Data table includes poverty status by age bracket and for different income levels. |
| Marital Status | B12001 | Data table includes marital status by sex. |
| Parental Status | B09002 | Data table includes parental and childcare status. |

Table. 5. Substance Use Risk Index using TEDS Admission Data

10.6 Social Determinants of Health Index

Data: Social Determinants of Health Index

Data: U.S. Census Bureau American Community 5-year Estimates (ACS), 2015-2019

The Social Determinants of Health Index was developed to promote health equity through providing a better understanding of the environments that create and ameliorate the multifactorial risk factors of substance misuse on priority populations. All data for the Substance Use Vulnerability Index comes from the U.S. Census Bureau American Community Survey 5-year estimates (2015-2019). The 5-year pooled dataset represents 60 months of data that enable more precise multi-year estimates. Because many of Iowa's counties have relatively small populations, the 5-year set of pooled data is the only type of ACS estimates that are available to use across all 99 counties. Following the standards set by Washington State's Social Determinants of Health Website (www.doh.wa.gov/DataandStatisticalReports/HealthDataVisualization/SocialDeterminantsofHealthDashboards/CensusTractSocialDeterminantsofHealth), PSC collected information on the educational attainment level, health insurance coverage, Englishproficiency, unemployment, and poverty status in each county and then used this information to calculate the average health index for each of Iowa's 99 counties

Table. 7. Substance Use Risk Index using U.S. Census Bureau American Community 5-year Estimates (2015-2019)

| Risk Characteristics | Census Table | Description |
|---------------------------|---------------|--------------------------------------------------------------------------------------|
| Educational Attainment | S1501 | Data table includes educational attainment level for population 25+, by sex. |
| Health Insurance Coverage | S2701_C05_001 | Variable is percent of civilian noninstitutionalized population that is uninsured. |
| English Proficiency | S1601_C06_001 | Variable is percent of population 5+ that speaks English less than very well. |
| Un employment,16+ | S2301_C04_001 | Variable is percent of population 16+ that is in the labor force, but is unemployed. |
| Poverty Status | S1701_C01 | Data table includes poverty status by age bracket and for different income levels. |

The Social Determinants of Health Index was developed to promote health equity through providing a better understanding of the environments that create and ameliorate the multifactorial risk factors of substance misuse on priority populations. All data forthe Substance Use Vulnerability Index comes from the U.S. Census Bureau American Community Survey 5-year estimates (2015-2019). The 5-year pooled dataset represents 60 months of data that enable more precise multi-year estimates. Because many of Iowa's counties have relatively small populations, the 5-year set of pooled data is the only type of ACS estimates that are available to use across all 99 counties. Following the standards set by Washington State's Social Determinants of Health Website (www.doh.wa.gov/DataandStatisticalReports/HealthDataVisualization/SocialDeterminantsofHealthDashboards/CensusTractSocialDeterminantsofHealth), PSC collected information on the educational attainment level, health insurance coverage, Englishproficiency, unemployment, and poverty status in each county and then used this information to calculate the average health index for each of Iowa's 99 counties
